New Hampshire Patient Transportation and Restraint Data:

Involuntary Emergency Admissions to Designated Receiving Facilities
October 2022 – September 2023 Final Report

Passed and signed into law in July 2019, SB 177 included an explicit option of using ambulances or law enforcement for transportation of patients that have been identified as Involuntary Emergency Admissions (IEAs) from hospital emergency departments to New Hampshire Hospital (NHH) or other Designated Receiving Facilities (DRFs). The new language became law effective January 1, 2020. Included as part of that law is the requirement that NHH and DRFs collect information on all patients they receive as to how they were transported and whether restraints were used in the transfer. Annual reports will be shared with NH Health and Human Services Oversight Committee.

As background, an ad hoc stakeholder group came together in the fall of 2019 to ensure that SB 177 was implemented in a timely way. The group was led by the NH Hospital Association and the NH Community Behavioral Health Association; other participants included NH Hospital; NH Department of Health and Human Services; NH Department of Safety; NH Medical Society; Mental Health Center of Greater Manchester; NH Sheriffs Association; NAMI-NH; the Disabilities Rights Center; the Children's Behavioral Health Collaborative. Several hospitals, community behavioral health providers, and private ambulance companies also participated. There was a total of 7 meetings held, and the group developed a webinar explaining the new law, which was offered to stakeholders and the public prior to January 1, 2020 effective date.

This is the fourth report provided to the HHS Oversight Committee and represents the months of October 2022-September 2023 ("Year 4"). The first report ("Year 1") covered the first nine months (January – September) of 2020, the second year ("Year 2") represented the months of October 2020 – September 2021, and the third year ("Year 3") represented October 2021 - September 2022. All seven New Hampshire DRFs (Concord Hospital - Franklin, Cypress Center, Elliot Hospital, Hampstead Hospital, New Hampshire Hospital, Parkland Medical Center, and Portsmouth Regional Hospital) submitted data to the New Hampshire Hospital Association for aggregation.

Year 4 Summary Stats:
Between October 2022 – September 2023, there were a total of 1,146 IEA transfers to NH DRFs with an average of 96 transports per month. This included:

- 1,138 (99.3%) adult (18+) and 8 (0.7%) child transports
- 437 (38.1%) transports by ambulance, 695 (60.7%) by law enforcement (sheriff or police), 13 (1.1%) by other means, and 1 unknown transport type (0.1%).
- 537 (46.9%) transports occurred without restraints, 604 (52.7%) with restraints applied before transport, and 5 (0.4%) transfer of unknown restraint status
- For the 604 transfers using restraints, 287 (47.5%) used a combination, 160 (26.5%) used handcuffs only, 155 (25.7%) used waistbelt only, 1 (0.2%) used leg restraints only, and 1 (0.2%) was an unknown type.

DRF Volume Summary:

The table below displays the volume of IEA patients transported to each DRF by age group and month. If a patient was transferred to a DRF unit from another location in the same facility, this transfer was removed from totals as it does not qualify as an external transfer.

Year 4 Tranports Summary by DRF

		2022			2023									
DRF	**Age Group**	**Oct**	**Nov**	**Dec**	**Jan**	**Feb**	**Mar**	**Apr**	**May**	**Jun**	**Jul**	**Aug**	**Sep**	**Total**

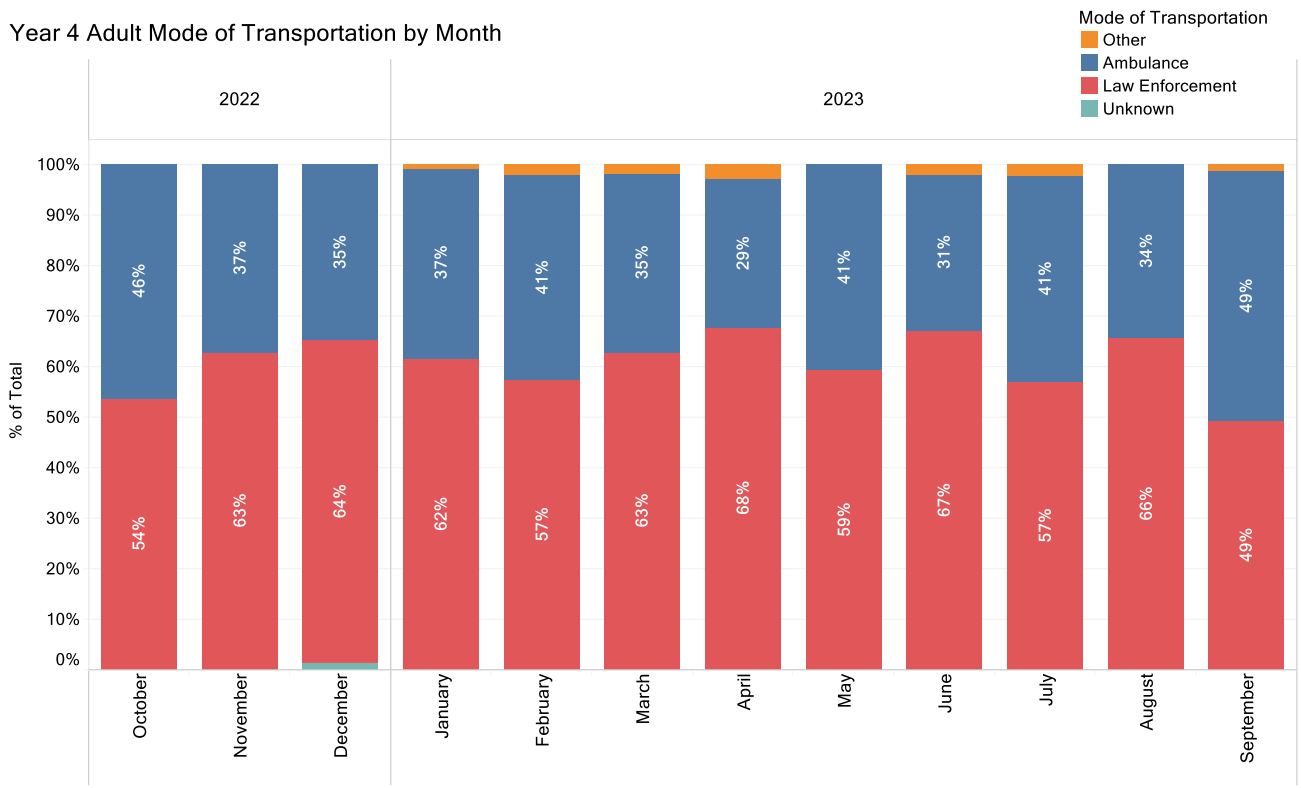
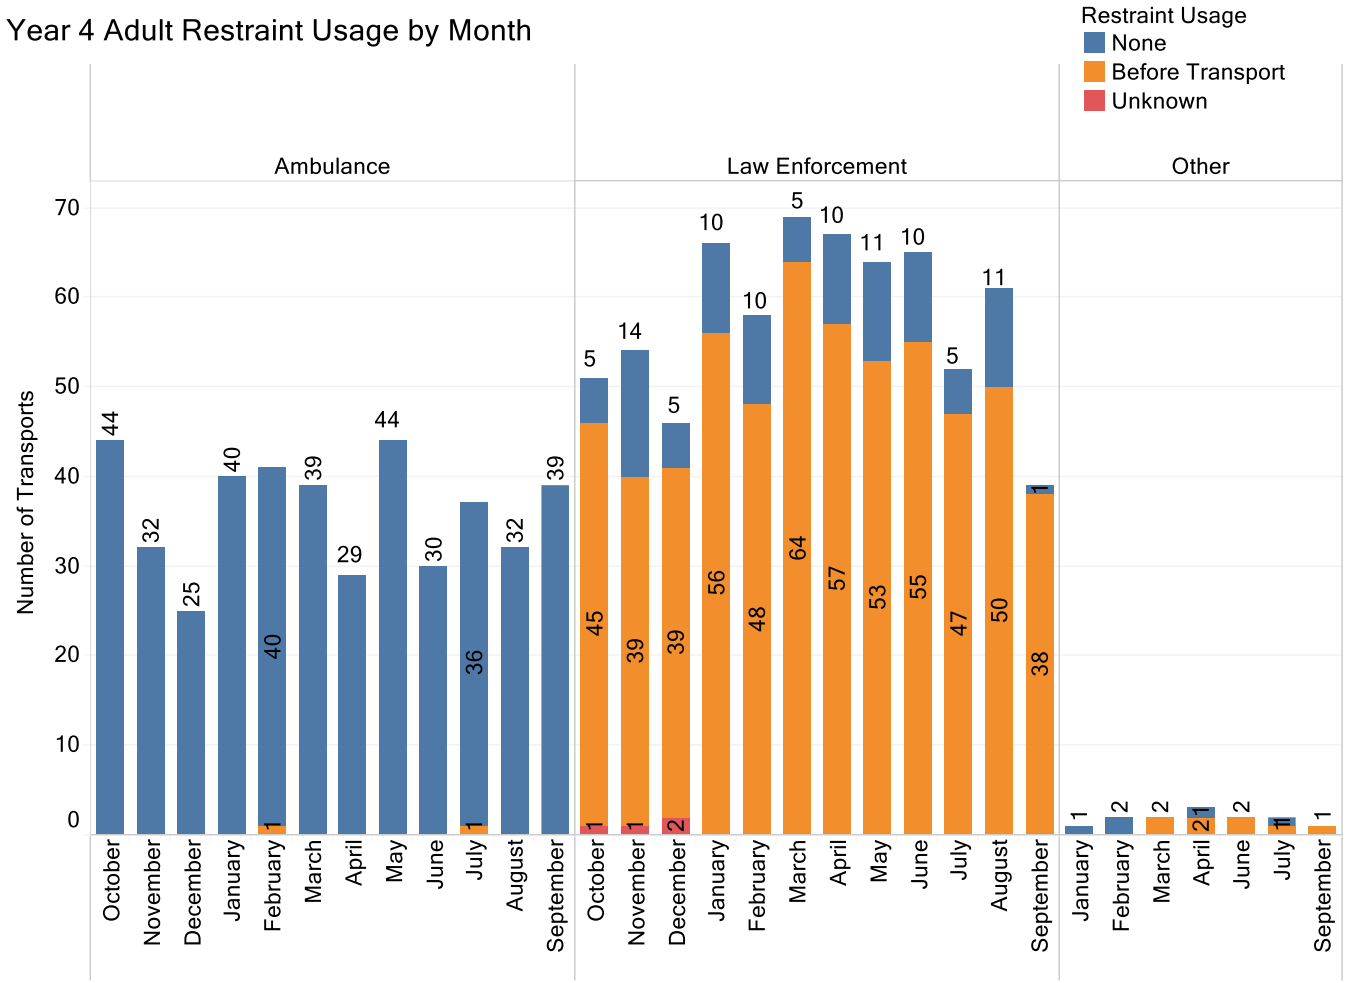
Adult Transport and Restraints

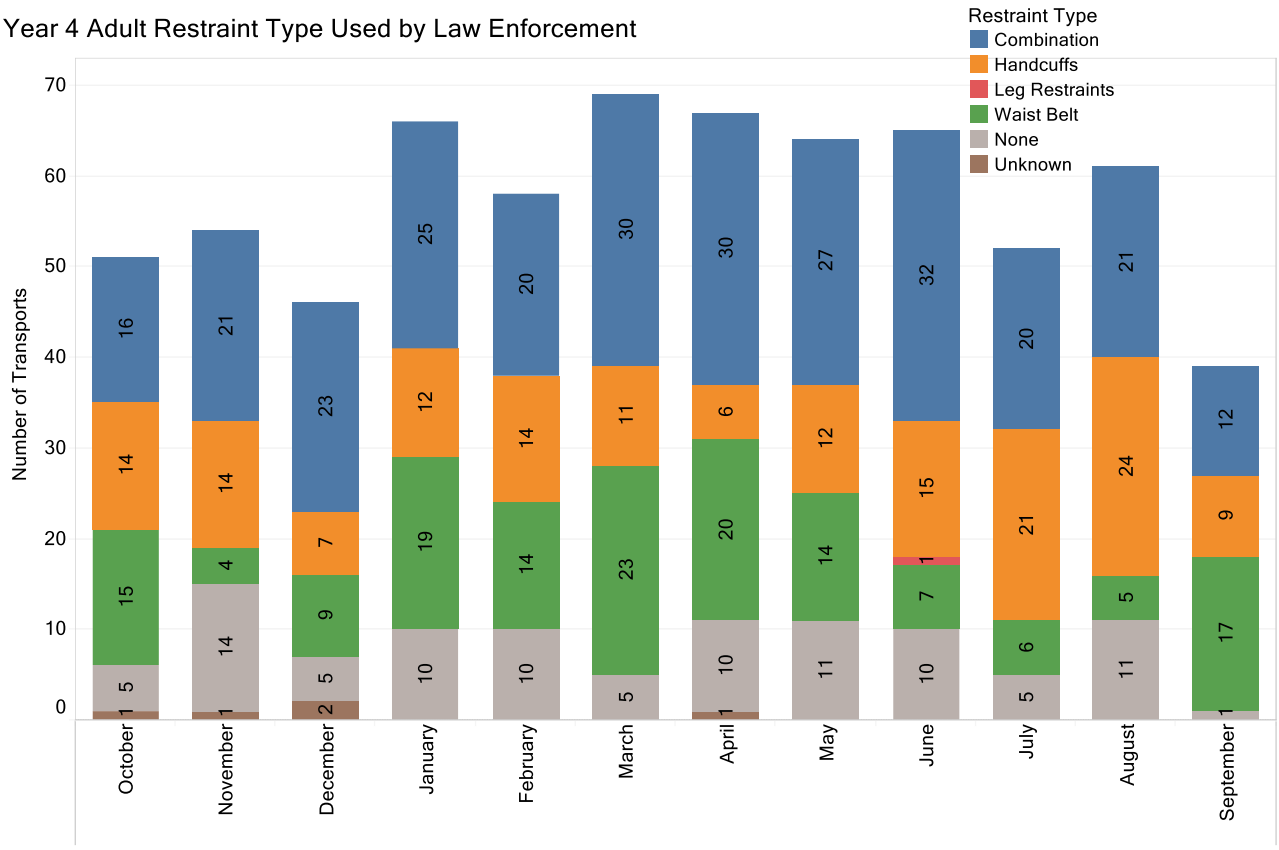
Mode of Transportation Summary: IEA patients were transported to a DRF from a sending facility by law enforcement, ambulance, or other (e.g. facility staff). For adults, the most frequent method of transport was law enforcement (60.8%), followed by ambulance (38.0%), other (1.1%), and unknown (0.1%).



Restraint Application Summary: DRFs submitted data on restraint usage including the timing of restraint application - before or during transfer. All restraints in Year 4 were applied before transfer and remained on the patient until arrival at the DRF. There were zero instances of restraints being removed or applied during transport. Restraint application frequency varied by mode of transportation. There were 2 instances (0.5%) of restraint usage in ambulances compared to 85.5% of law enforcement transports.

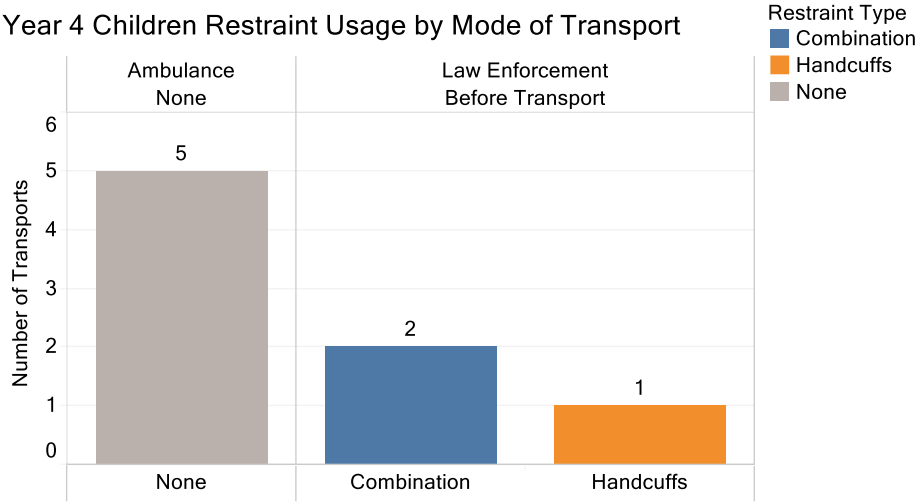


Restraint Type Summary: Varying restraint types were used on IEA patients during transfer. Most restrained transfers utilized handcuffs or a combination of restraint types. Charts below show information for adult law enforcement transfers. See tables in appendix for full detail on restraint types.



Child Transports and Restraints

Eight children were transported to a DRF during Year 4 including 5 by ambulance and 3 by law enforcement. Restraint restraints were utilized for the three law enforcement transports, one with handcuffs and 2 with combination.



Data Trends Across Years 1 – 4

The comparison tables to the right display selected metrics across Years 1-4. The average number of transports per month and children transports continue to decrease. Other metrics remain relatively stable.

Comparison of Year 1 - Year 4 IEA Transports				
Metric	**Year 1** *(9 Months)*	**Year 2** *(12 Months)*	**Year 3** *(12 Months)*	**Year 4** *(12 Months)*
