1. At the bottom of the interactive map (on this page link below) is a ranking of states' **percentage of enrollment on Medicaid. NH in 2022 had the fourth lowest** population percentage even with Medicaid Expansion and the Federal PHE. https://www.kff.org/interactive/medicaid-state-fact-sheets/

2. In the functionality of this interactive tool (in the link below, the latest info is 2021) NH had the best (we were #1) percentage of Employer sponsored coverage in the US at 69.3%.

   https://www.kff.org/other/state-indicator/nonelderly-0-64/?activeTab=map&currentTimeframe=0&selectedDistributions=employer&sortModel=%7B%22colId%22:%22Employer%22,%22sort%22:%22desc%22%7D

3. According to Kaiser's fact sheets (pdfs attached) , 70% of NH Medicaid enrollees are working compared to the US percentage of 63%; NH's Medicaid enrollee percentage has increased from 65% in the October 2019 report (pasted in below) to in this October 2022 report 70%.

4. **A possible conclusion one could draw is that the combination of the 1332 Waiver by NHID and Medicaid Expansion have functioned to support the health of NH's insurance markets, including lower premium rates (UI/RWJ report)*, and the health of its workforce in general and in Medicaid in particular as more people are working today than three years ago.**

*Benchmark premiums ranged from a low of $309 per month in New Hampshire to a high of $766 in West Virginia. https://www.urban.org/sites/default/files/2022-04/Marketplace%20Premiums%20and%20Competition%202019-22.pdf
