New Hampshire Patient Transportation and Restraint Data:

Involuntary Emergency Admissions to Designated Receiving Facilities
October 2023 – September 2024 Final Report

Passed and signed into law in July 2019, SB 177 included an explicit option of using ambulances or law enforcement for transportation of patients that have been identified as Involuntary Emergency Admissions (IEAs) from hospital emergency departments to New Hampshire Hospital (NHH) or other Designated Receiving Facilities (DRFs). The new language became law effective January 1, 2020. Included as part of that law is the requirement that NHH and DRFs collect information on all patients they receive as to how they were transported and whether restraints were used in the transfer. Annual reports will be shared with NH Health and Human Services Oversight Committee.

As background, an ad hoc stakeholder group came together in the fall of 2019 to ensure that SB 177 was implemented in a timely way. The group was led by the NH Hospital Association and the NH Community Behavioral Health Association; other participants included NH Hospital; NH Department of Health and Human Services; NH Department of Safety; NH Medical Society; Mental Health Center of Greater Manchester; NH Sheriffs Association; NAMI-NH; the Disabilities Rights Center; the Children's Behavioral Health Collaborative. Several hospitals, community behavioral health providers, and private ambulance companies also participated. There was a total of 7 meetings held, and the group developed a webinar explaining the new law, which was offered to stakeholders and the public prior to January 1, 2020 effective date.

This is the fifth report provided to the HHS Oversight Committee and represents the months of October 2023-September 2024 ("Year 5"). The first report ("Year 1") covered the first nine months (January – September) of 2020. "Year 2", "Year 3", "Year 4" represent the subsequent 12 months of October to September for each of the following years. All seven New Hampshire DRFs (Concord Hospital - Franklin, Cypress Center, Elliot Hospital, Hampstead Hospital, New Hampshire Hospital, Parkland Medical Center, and Portsmouth Regional Hospital) submitted data to the New Hampshire Hospital Association for aggregation.

Year 5 Summary Stats:
Between October 2023 – September 2024, there were a total of 1,251 IEA transfers to NH DRFs with an average of 104 transports per month. This included:

- 1,247 (99.7%) adult (18+) and 4 (0.3%) child transports
- 497 (39.7%) transports by ambulance, 738 (59.0%) by law enforcement (sheriff or police), 14 (1.1%) by other means, and 2 unknown transport type (0.2%).
- 597 (47.9%) transports occurred without restraints, 643 (51.6%) with restraints applied before transport, 1 (0.1%) with restraints applied at the beginning and then removed during transport, and 6 (0.5%) transfer of unknown restraint status
- For the 644 transfers using restraints, 221 (34.3%) used a combination, 133 (20.7%) used handcuffs only, 288 (44.7%) used waistbelt only, and 2 (0.3%) used leg restraints only, and 1 (0.2%) was an unknown type.

DRF Volume Summary:

The table below displays the volume of IEA patients transported to each DRF by age group and month. If a patient was transferred to a DRF unit from another location in the same facility, this transfer was removed from totals as it does not qualify as an external transfer.

Year 5 Transport Summary by DRF

		2023			2024									
DRF	Age Group	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Total
Concord Hospital - Franklin	Adult	13	9	16	14	10	9	16	15	15	17	11	8	153

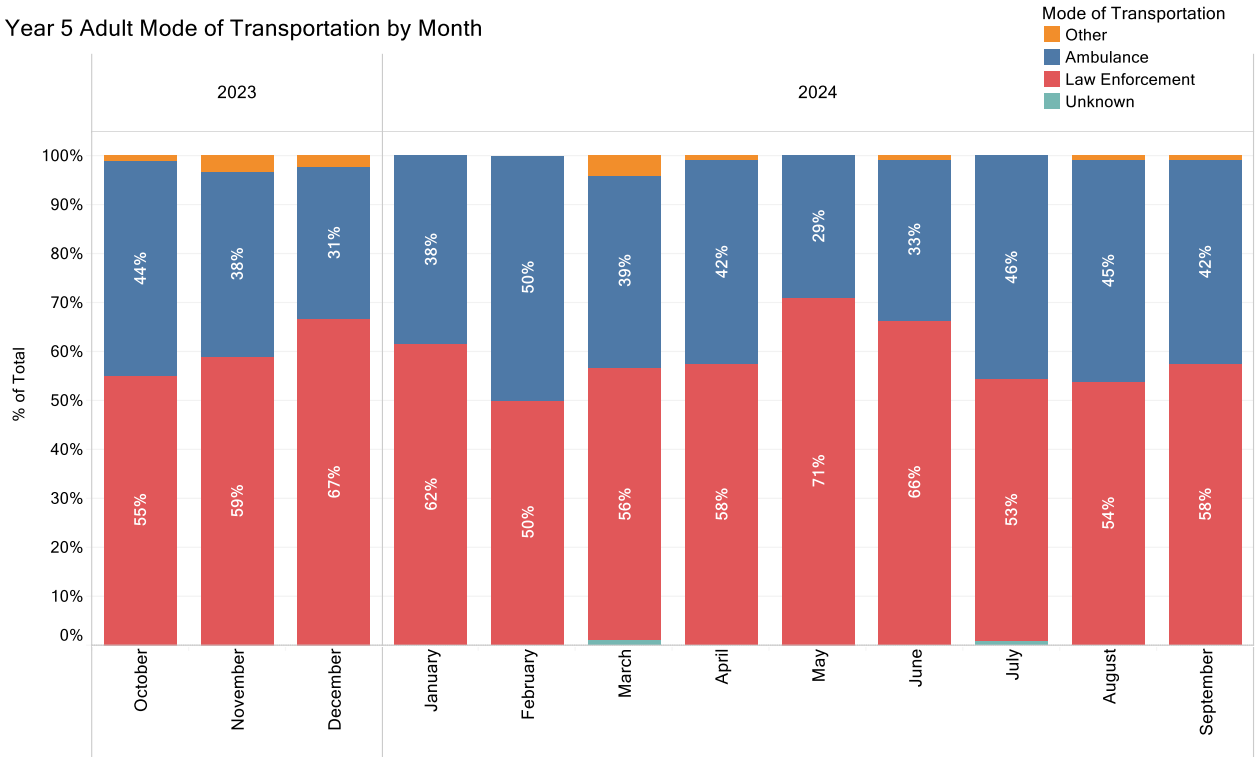
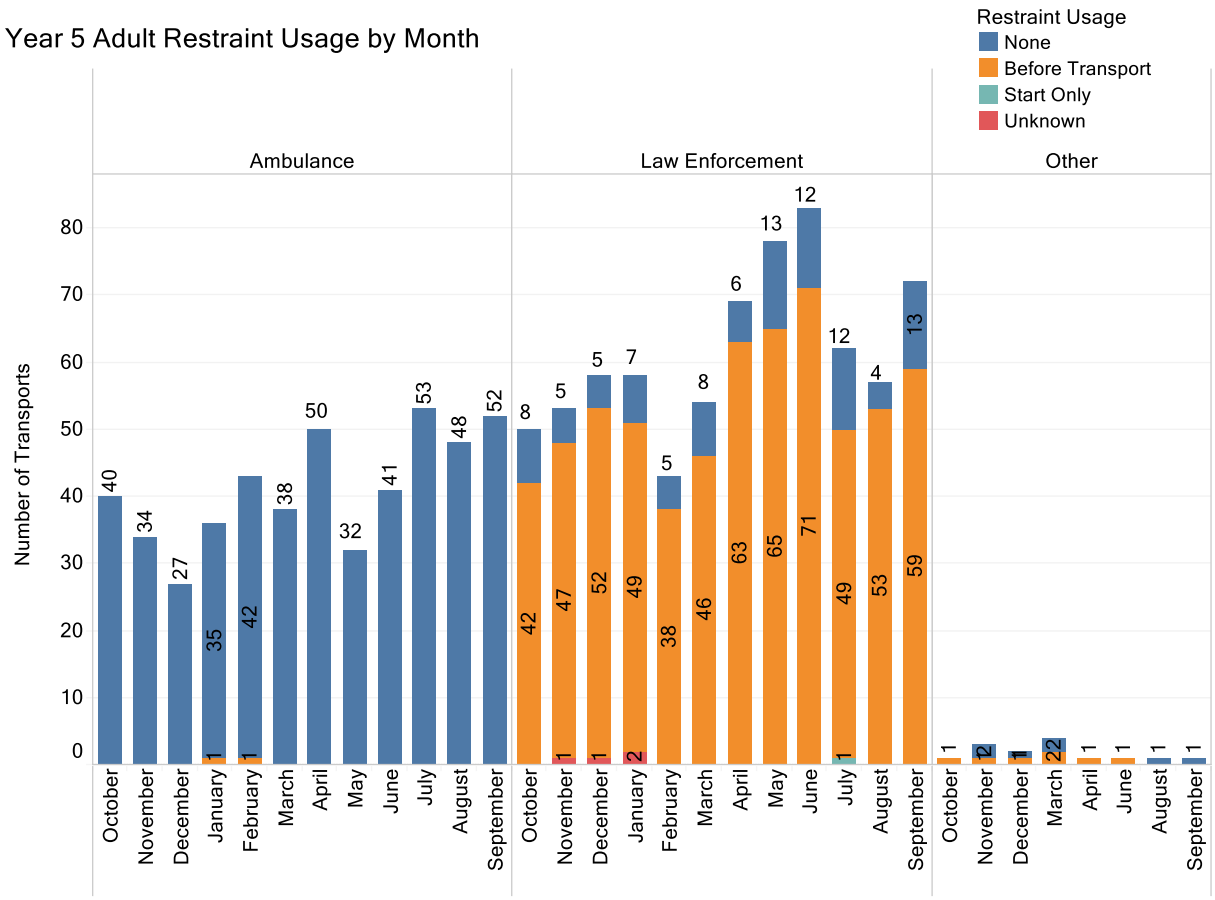
Total		91	90	87	94	88	97	120	111	126	116	106	125	1,251

Adult Transport and Restraints

Mode of Transportation Summary: IEA patients were transported to a DRF from a sending facility by law enforcement, ambulance, or other (e.g. facility staff). For adults, the most frequent method of transport was law enforcement (59.1%), followed by ambulance (39.6%), other (1.1%), and unknown (0.2%).

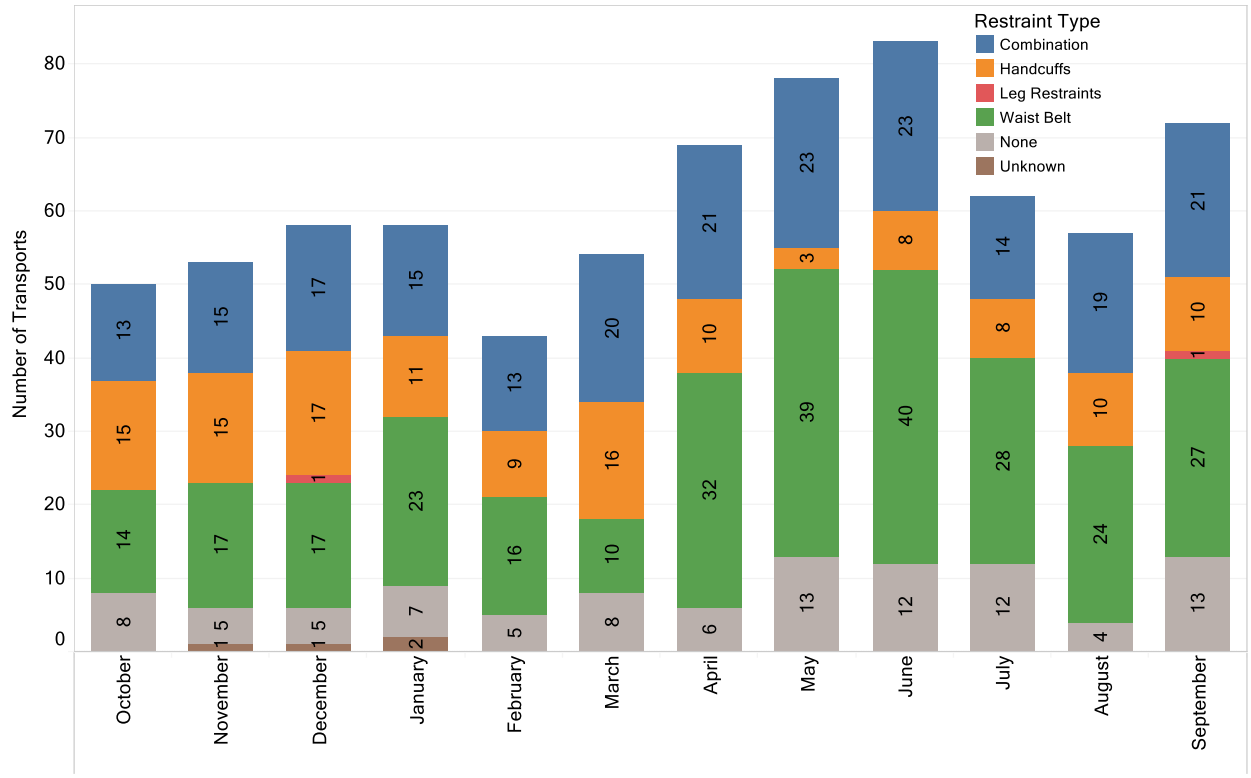


Restraint Application Summary: DRFs submitted data on restraint usage including the timing of restraint application - before or during transfer. Almost all restraints in Year 5 were applied before transfer and remained on the patient until arrival at the DRF. There was one instance of restraints being removed during transport. Restraint application frequency varied by mode of transportation and 4 instances where it is unknown if restraints were used. There were 2 instances (0.4%) of restraint usage in ambulances compared to 86.0% of law enforcement transports.



Restraint Type Summary: Varying restraint types were used on IEA patients during transfer. Most restrained transfers utilized a waist belt or a combination of restraint types. Charts below show information for adult law enforcement transfers. See tables in appendix for full detail on restraint types.

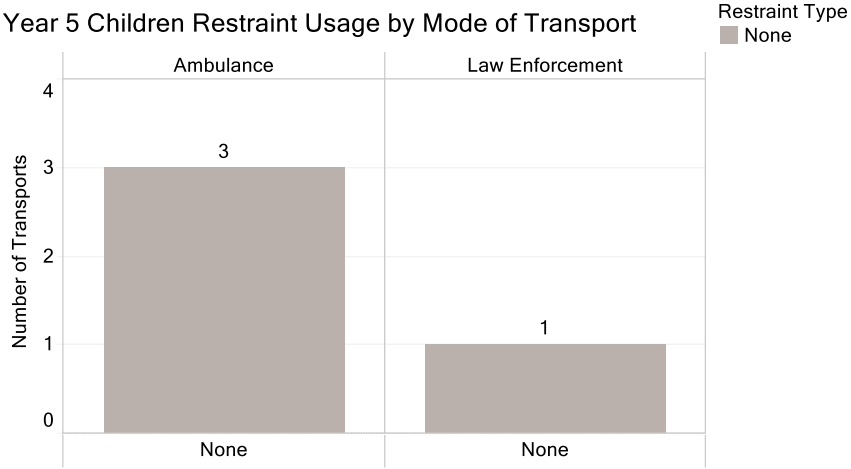
Year 5 Adult Restraint Type Used by Law Enforcement



Child Transports and Restraints

Four children were transported to a DRF during Year 5 including 3 by ambulance and 1 by law enforcement. No restraints were used for transporting children in Year 5.

Year 5 Children Restraint Usage by Mode of Transport



Data Trends Across Years 1 – 5

The comparison tables to the right display selected metrics across Years 1-5. Metrics remain relatively stable apart from an increase in the overall number of transports which is in part due to New Hampshire Hospital opening 12 additional beds in April 2024.

Comparison of Year 1 - Year 5 IEA Transports					
Metric	**Year 1** *(9 Months)*	**Year 2** *(12 Months)*	**Year 3** *(12 Months)*	**Year 4** *(12 Months)*	**Year 5** *(12 Months)*
