

One has to wonder the motivation to de-incentivize renewable energy in NH.

While RPS are increasing in other NE states, this bill and its companion (219 and 567) seek to diminish and eventually eliminate this incentive. In the long run, the state benefits from locally produced energy which, in turn, lowers costs for all ratepayers. RPS promotes/incentivizes use of energy sources as varied solar, wind and even wood.

These bills do not promote renewable energy options of the state, and thus should be opposed.
