Support for SB540-FN – relative to portable solar generation devices.

I am writing to express my support for SB540, which would allow for the use of portable solar generation devices, often called "balcony solar" in New Hampshire. This legislation represents a pragmatic means of saving money and reducing the peak demand for electrical power. Balcony solar systems enable homeowners and renters to plug in small, safe, quiet, non-polluting, mobile solar units directly into a standard electrical receptacle. These portable units may be also coupled with Batteries for use in remote locations or as back up power supplies. SB540 is a bipartisan solution that benefits all ratepayers. I urge you to support SB540 and help make this practical energy solution a reality for New Hampshire.

Sincerely,

Kennard B. Soleyn
